

PROGRAM:-

```
#include<stdio.h>
#include <netinet/in.h>
int main()
{
    short s=0x56AB;
    printf("value in deciaml:%d\n",s);

    printf("little endian:%x\n",ntohs(htons(s)));
    printf("final value : %d\n",ntohs(htons(s)));
}
```

OUTPUT:-

The screenshot shows a terminal window with the title bar "sekhar@sekhar-Inspiron-3542: ~/cse2-091-3-2-LABS/Computer_Networks/lab1". The terminal content shows the compilation and execution of a C program. The program prints the decimal value of a short integer, its big-endian and little-endian hexadecimal representations, and the final value after conversion.

```
sekhar@sekhar-Inspiron-3542:~/cse2-091-3-2-LABS/Computer_Networks/lab1$ gcc endian_conversion.c
